Reasons for distant talking mics for ASR

- **convenience**: ease-of-use → acceptance of services;
- **safety**: car navigation, surgery;
- **“disappearing computer” & ambient intelligence** paradigm: technology is invisible yet present whenever needed.*

*And here is a footnote, btw.

However, we assume that the AIR is **time invariant**:

$$h_l(p) = h(p) \quad \forall l. \quad (1)$$

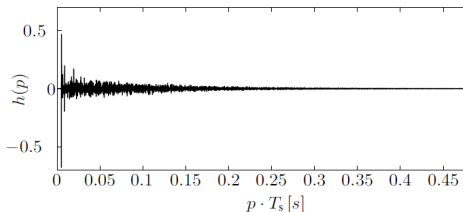

Figure 10.1: *Example of a typical acoustic impulse response, measured in a large office room (T_s sampling interval).*
